Cash Usage

Transaction Summary Dashboards

Transaction Summary Dashboards provide an aggregated view of an organization's card program with reports that show trends on card usage and program growth by hierarchy.

Graphical views display summary results by month or by quarter for the following key metrics:

- Spend amounts and transaction counts
- Average transaction amounts
- Cash usage relative to total spend

The "Link to Details" feature for the Transaction Summary Dashboards shows the transactions that account for the trends displayed in the aggregated reports. Our advanced time slider functionality allows users to expand or contract the time period for the report.
